Experiment Number	1
Experiment Title	Build a Resume using HTML/CSS
Date of Experiment	07/01/25
Date of Submission	13/01/25

1. Objective:- To design and develop a professional resume using HTML and CSS.

2. Procedure:-

1. I opened a new project folder and created an `index.html` file for the structure of my resume.
2. I wrote HTML code for sections: Header (Name, Photo, Contact), Skills, Projects, Work Experience, and Education.
3. I added hyperlinks to Phone Number, Email, LinkedIn, Github.
4. I used CSS to apply design elements for proper alignment, spacing, and colors.
5. I made the layout responsive using Flexbox and Grid.
6. I integrated images and video links as required.
7. I tested the design across devices.

3. Code:-

Index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

      <h2>About Me</h2>
      <p>Hello! I'm Akriti Patro, a passionate frontend web developer with an interest in

```

HTML and CSS. Currently in my 3rd year of B.Tech in Electronics and Computer Science Engineering.</p>

<p>I am dedicated to leveraging my technical and soft skills to create intuitive, user-friendly web experiences.</p>

<p>As an intern in the AWS Cloud Computing program through the AICTE-EduSkills Virtual Internship Program, I gained hands-on experience in cloud technologies.</p>

<p>My technical toolkit includes expertise in SQL, MySQL, GitHub, and tools like Visual Studio Code and Jupyter Notebook.</p>

<p>Beyond technical skills, I excel in team collaboration, effective communication, and time management. My adaptability and passion for learning drive me to stay updated with the latest industry trends.</p>

<p>With aspirations of pursuing an MBA after my B.Tech, I aim to merge my technical expertise with management and marketing skills to secure a dynamic role in the tech industry.</p>

<p>Feel free to explore my portfolio and connect with me for collaboration opportunities. Let's build something amazing together!</p>

<h2>Projects</h2>

<div class="project">

<h3>Real-Time Predictive Maintenance Model</h3>

<p>This project leverages Edge Computing and Digital Twin technology to create a real-time predictive maintenance solution for washing machines. The goal is to address unscheduled breakdowns, costly repairs, and prolonged downtime.</p>

<p>The strategy aims to improve operational performance by making washing machines more reliable and efficient. Digital Twin technology mimics machine operation, enabling continuous monitoring and analysis to predict issues before they occur.</p>

<p>Edge computing enhances the Digital Twin by providing quicker analysis on edge devices, reducing dependency on cloud infrastructure and enabling real-time decision-making.</p>

<p>This project aligns with the emerging field of smart technologies, contributing to smarter, more efficient household appliances and promoting sustainability.</p>

</div>

<div class="project">

<h3>Mental Health Support Buddy</h3>

<p>The Mental Health Support Buddy is a virtual companion designed to address rising mental health challenges, such as anxiety, depression, and stress. It provides automated, personalized support for better emotional well-being.</p>

<p>By leveraging machine learning (ML) and deep learning (DL), the tool understands users' emotional states and responds empathetically, offering real-time support to users in need.</p>

<div class="video-container">

<video controls>

<source src="Mental Health Support Buddy.mp4" alt="Video thumbnail for Mental Health Support Buddy"/>

</video>

</div>

<div class="project">

<h3>Face Detector for Attendance System</h3>

<p>This project focuses on designing a face detection system for an attendance management application. The system uses a camera to detect faces in real-time. When a face is detected, the indicator turns red, signaling successful recognition; when no face is present, it turns blue. This color-coded feedback simplifies attendance marking, providing visual confirmation.</p>

<p>The system integrates computer vision algorithms such as Haar cascades or deep learning-based facial recognition models with hardware for real-time feedback. Face detection is the process of identifying and locating human faces in images or video frames, forming a key step in facial recognition. Algorithms like the Viola-Jones face detector and Convolutional Neural Networks (CNNs) are employed to identify facial features such as eyes and nose.</p>

<p>Detected face coordinates are used to activate the color indicators, enhancing

the user experience and ensuring an efficient, accurate attendance management process.</p>

4. Results/Output:-

5. Remarks:-

In this experiment, I successfully created a responsive resume website from scratch using HTML and CSS. The structure includes essential sections such as the header (with my name, photo, and contact details), skills, projects, work experience, and education. I ensured that the layout was visually appealing and accessible across devices by utilizing Flexbox and Grid for responsiveness. Additionally, I integrated essential links such as my phone number, email, LinkedIn, and GitHub to provide easy contact options. The design was tested across various devices to ensure a consistent and optimized viewing experience. This experiment allowed me to apply core web development skills while focusing on both functionality and design.
